

Double Reverse Geometry Ortho-K lens

- B.C. Flatter than K. for 3~5 D
- Fitting Curve : 8 ~ 12 D steeper
- Alignment Curve 3 ~ 5 D steeper
- Bulls eye F.S. pattern
- 1~2 Pairs for -5.00 D

Basic 4-Curve OK Lens

- Optical zone (BC, Base curve)
Central Push or Positive force
- Fitting zone (FC, Fitting curve)
Connecting OZ & AZ
Pull or Negative force
Space for tear & tissue redistribution

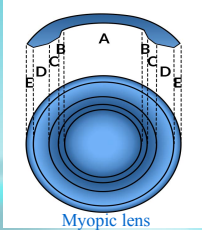

Basic 4-Curve OK Lens

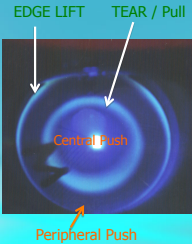

- Alignment zone (AC, Alignment curve)
Peripheral Push force
Adhesive force for centration
- Peripheral zone (PC, peripheral curve)
Form edge lift
Tear pumping

Hyperopic Lens Drawings

Hyperopic lens

GLOBAL-CX
WISCON

Optical zone & Base curve

- K-code → define LSD or lens tightness
- Power-code → define Target Power
- Over target → Ensure sufficient reduction
 - -0.25 ~ -1.00: = Target power
 - -1.25 ~ -5.00: +1.25
 - -5.25: +1.75
 - ≥ -5.50: +2.00
 - Hyperopia: -0.75

GLOBAL-CX
WISCON

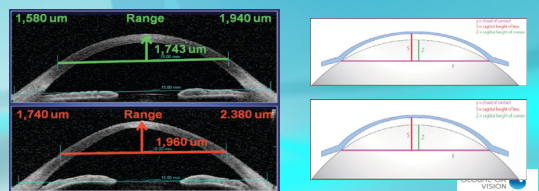

Optical zone & Base curve

- Determine B.C. by
 - BOZR (D) = K-code – (Target power + Over target)
 - Vertex Target power
 - Available from B.C. table
 - Compensate Over target in front (Lens power)
 - eg. / K-code = 44.0 / Power-code = -3.00
 - B.C.= 44 – Vertex (3.00) - 1.25 = 39.85D (8.47mm)
 - Lens power = +1.25
- Optical zone: 5.2 ~ 6.0mm

Fitting Sagittal Depth (SD)

- Corneal contour reconstruction (KSD)
 - KSD : R_0 & eccentricity
- Determine lens sagittal depth (LSD)
 - LSD = KSD + Tear allowance

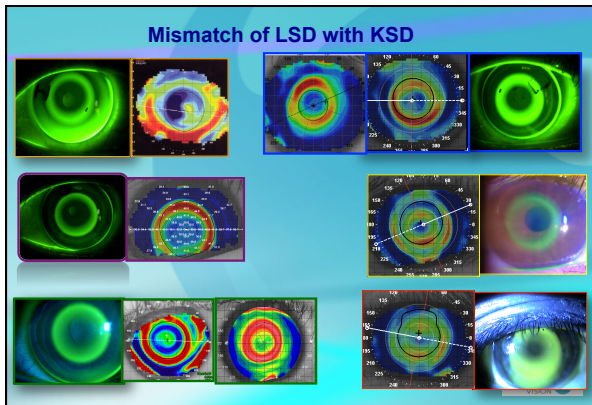

E-value & R_0 for KSD

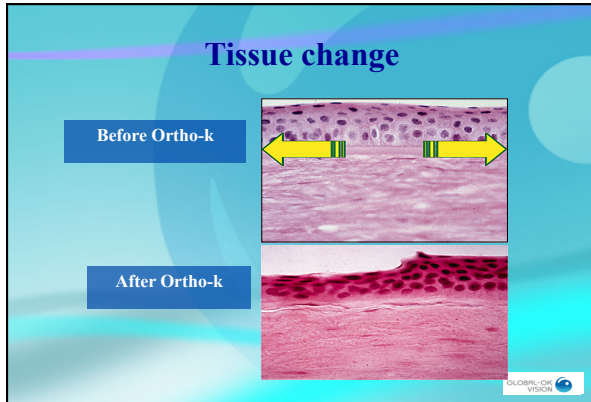

$R_0 \backslash e$	e=0.4	e=0.5	(per 0.1 e-value)
43.00	1.727	1.691	0.036 mm
43.25	1.740	1.703	0.037 mm
43.50	1.751	1.713	0.038 mm
43.75	1.765	1.726	0.039 mm
44.00	1.776	1.736	0.040 mm
44.25	1.787	1.747	0.040 mm
per 0.25D	0.012 mm	0.011 mm	Tolerable if <0.01

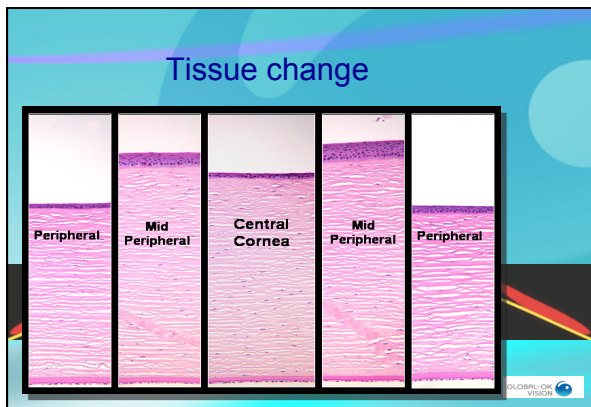

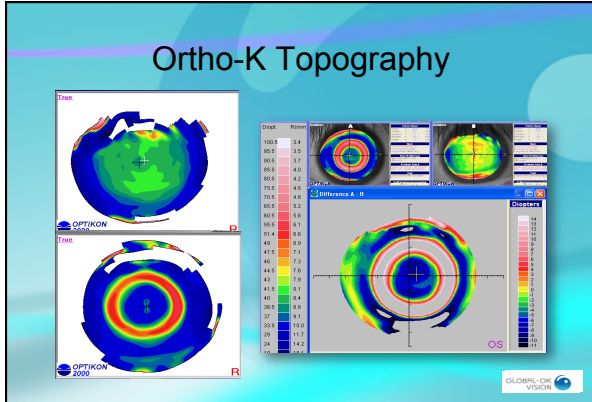

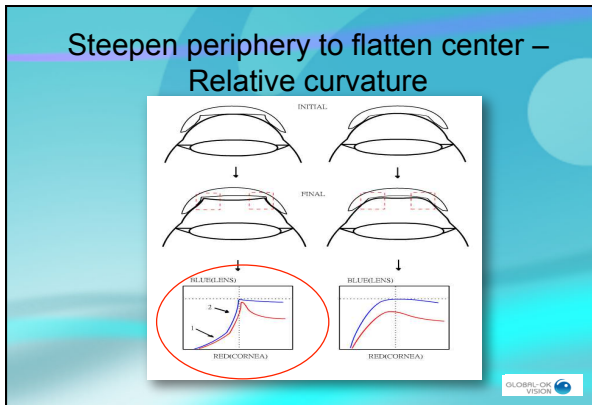

Reformulate Munnerlyn's formula

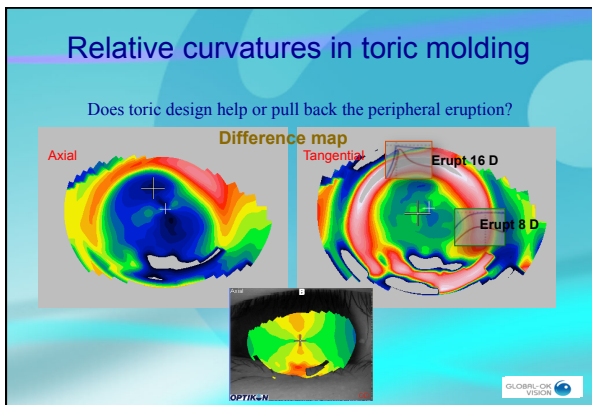

- *Tung's formula:*
 - Epithelial thinning = $(RD^2 / 3) * (1/2) = RD^2 / 6$

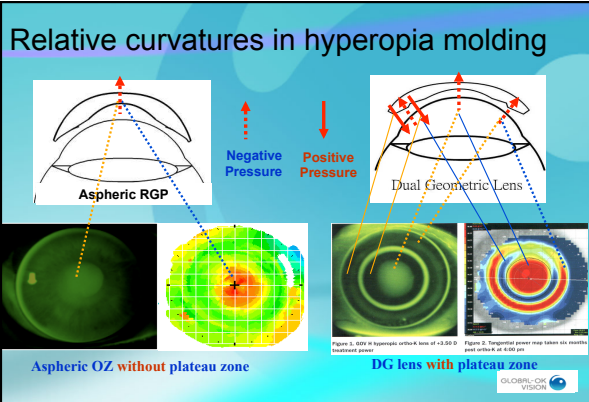

Target power	Munnerlyn's	Tung's
3 D	4.5 mm	6.3 mm
4 D	3.9 mm	5.5 mm
6 D	3.2 mm	4.5 mm
8 D	2.7 mm	3.9 mm
10 D	2.4 mm	3.5 mm
12 D	2.2 mm	3.2 mm

GLOBAL-COY
VISION

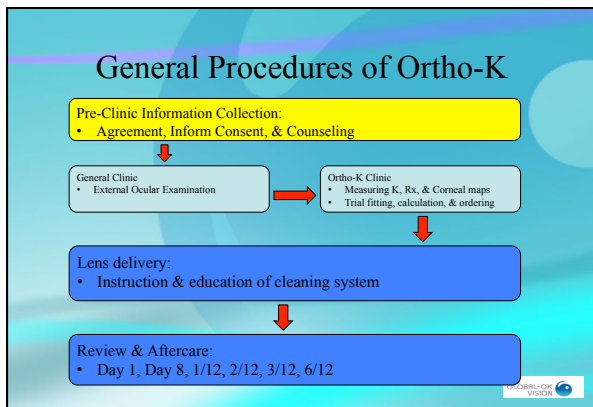

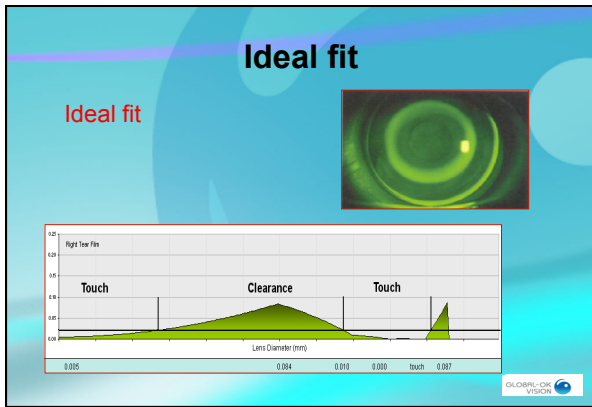

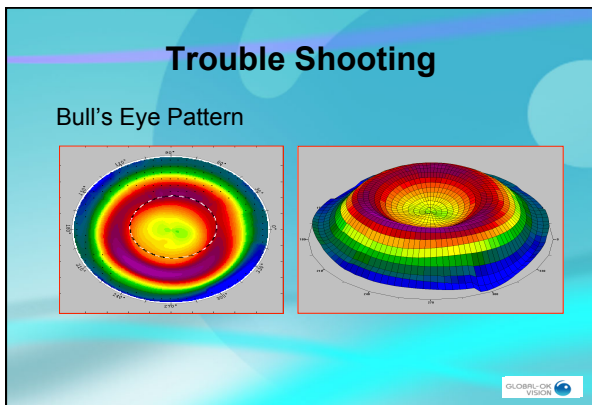

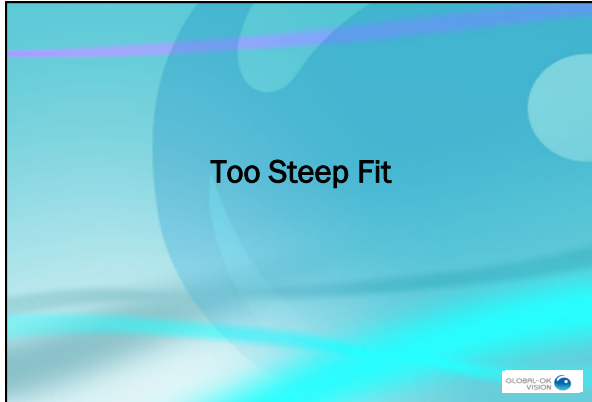

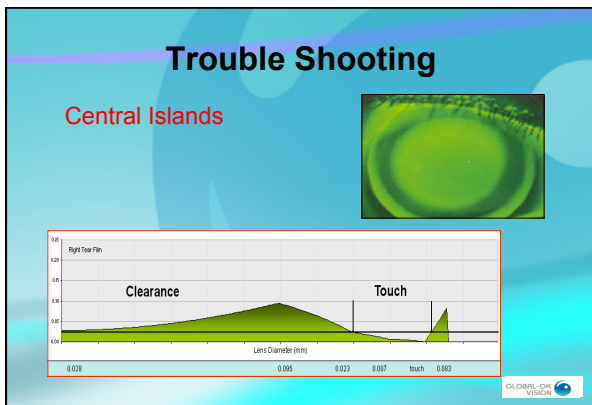

Central Island

Small areas of distortion along or near the visual axis

GLOBAL-CX
VISION

Central Island

Cause:

- Alignment curve too tight
- Excessive uncorrected astigmatism resulting in unequal forces on the cornea

Solution:

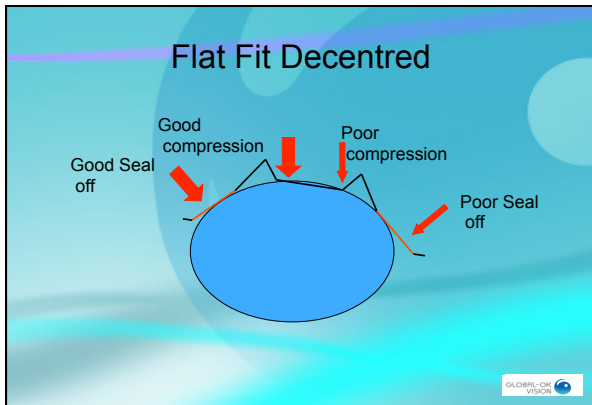

- Decrease sagittal depth of lens by flattening alignment curve
 - move up the column
- Decentered lens must be centered
- Flatten the BC if caused by uncorrected astigmatism
 - move one column right.

Too Flat Fit

GLOBAL-CX
VISION

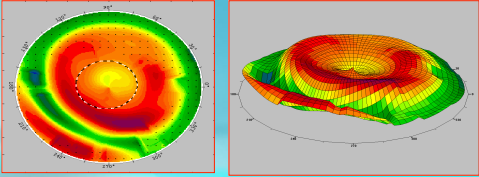

Flat Fit

Smiley Face
Flat fitting lens decentered superiorly

GLOBAL CONTACT LENS

Flat Fit

Smiley Face
Cause:
• Alignment curve too loose
Solution:
• Increase sagittal depth of lens by steepening alignment curve
– move down the column
